

Project Title

Hospital Dashboard with Real-Time Monitoring

Problem Statement

Hospitals handle a large amount of information every day, such as patient details, doctor availability, appointments, bed availability, medicine stock, and revenue. When this information is stored in different places, it becomes difficult to monitor hospital activities quickly. This can lead to delays and poor decision-making. A Hospital Dashboard solves this problem by showing all important hospital information in one place with real-time updates.

Objectives

- To develop a simple and user-friendly Hospital Dashboard.
 - To display real-time information about patients, doctors, and appointments.
 - To monitor bed availability, medicine stock, and hospital revenue.
 - To provide charts and reports for better understanding.
 - To help hospital administrators make faster and better decisions.
 - To reduce manual work and improve efficiency.
-

Scope

The Hospital Dashboard is designed to help hospital administrators monitor daily hospital activities. It displays important information such as patient details, doctor availability, appointments, bed status, medicine stock, and revenue in one place. The dashboard provides real-time updates, charts, and reports to support better planning and decision-making.

Expected Outcomes

- A simple and easy-to-use Hospital Dashboard.
- Real-time monitoring of hospital information.
- Quick access to important hospital data.
- Better management of hospital resources.
- Improved decision-making using charts and reports.

- Reduced manual work and increased efficiency.
